1. For questions where candidates must write their answers, do not award the mark if the answer is incomplete, or if there is additional information that is irrelevant or shifts the focus of the answer. However, accept other words with the same meaning as the correct answers in the markscheme.
2. Accept spelling and grammatical mistakes provided they do not change the meaning of the answer.
3. For questions where candidates choose an answer from options, if two answers are given – one in the box and one outside – only mark the answer inside the box.
4. Words inside brackets in this markscheme are optional: candidates may include these words in their answer, but they are not essential for the mark to be awarded. If there is more than one possible answer to a question, these answers are indicated by a slash (/).
5. This markscheme must be read in conjunction with the Marking Instructions for the relevant component on IBIS.

1. En ce qui concerne les questions pour lesquelles les candidats doivent rédiger leurs réponses, n'attribuez pas le point si la réponse est incomplète, ou s'il y a des informations supplémentaires qui ne sont pas pertinentes ou qui modifient l'objet de la réponse attendue. Néanmoins, l'utilisation de mots ayant le même sens que les bonnes réponses est acceptée dans le barème de notation.
2. Les erreurs d'orthographe et de grammaire sont acceptées si elles ne changent pas le sens de la réponse.
3. En ce qui concerne les questions pour lesquelles les candidats doivent choisir une réponse parmi plusieurs propositions, s'ils ont donné deux réponses différentes, l'une à l'intérieur de la case et l'autre en-dehors, ne prenez en compte que la réponse qui se situe dans la case.
4. Les mots entre parenthèses dans ce barème de notation sont facultatifs : les candidats peuvent les inclure dans leur réponse, mais ils ne sont pas essentiels pour justifier l'attribution du point. S'il y a plus d'une réponse possible à une question, celles-ci sont indiquées par une barre oblique (/).
5. Ce barème de notation est à lire parallèlement aux instructions de notation disponibles sur IBIS pour la composante concernée.

1. En las preguntas en las que los alumnos deban responder por escrito, no otorgue la puntuación si la respuesta está incompleta, o si aportan detalles adicionales que cambian el enfoque o no son pertinentes. No obstante, acepte otras palabras con el mismo significado que las respuestas correctas en el esquema de calificación.
2. Acepte los errores de ortografía y gramática, siempre y cuando no modifiquen el significado de la respuesta.
3. En las preguntas en las que los alumnos deban elegir una opción, si se han escrito dos respuestas (una dentro de la casilla y la otra fuera), puntúe únicamente la que esté dentro de la casilla.
4. Las palabras entre corchetes en este esquema de calificación son opcionales: los alumnos pueden incluirlas en la respuesta, pero no son fundamentales para que se otorgue la puntuación. Si hay más de una respuesta posible a una pregunta, esto se indica con una barra (/).
5. Este esquema de calificación debe leerse junto con las instrucciones para la corrección del componente en cuestión disponibles en IBIS.

Text A

You are going to hear a radio presenter interview an environmental researcher, Asha. The interview is about dying trees.

Chris	So, Asha, tell us about the trees.
Asha	Well, they're called giant sequoias, they grow in California, and they can live for up to 3 300 years. And they are huge: some can reach 90 metres into the sky.
Chris	Wow!
Asha	But they are dying, in a strange way.
Chris	What's strange about it?
Asha	They're dying from the top down.
Chris	Why?
Asha	Well, this is also strange. We thought giant sequoias could not be eaten by insects, particularly beetles, because of their chemical make-up. But we were wrong. This may be happening because they are weakened by drought and wildfire.
Chris	But, eventually old trees must die, right?
Asha	Yes, but giant sequoias today are dying at a faster rate and they are becoming shorter.
Chris	That sounds bad. Let's hear more after the break.
Chris	Welcome back to our discussion about dying trees. So, Asha, is the problem only with giant sequoias?
Asha	No, they are just one example, from California. We reviewed 160 previous scientific studies and data, including some satellite photographs of different places.
Chris	What did you find out?
Asha	Our on-going research tells us that between 1900 and 2015, the world lost one third of its old forests. Also, we know death rates have doubled in the last four decades.
Chris	Are there other examples?
Asha	Although few are familiar with the issues in Mongolia, we all know about the bush fires in Australia in 2019 and most of us are aware of the problems in the Amazon.
Chris	What is happening in the Amazon?
Asha	Dry seasons now last longer and come more often, and rainfall has dropped by as much as a quarter. This is changing the forest. Trees that grow fast are becoming more common.
Chris	Thank you, Asha!

Text B

You are going to hear a news story about a girl who survived a rare heart surgery.

Radio presenter	And now the health and science news bulletin.
Radio presenter	A British girl has recovered fully after spending 10 years with an extra heart. Yes, you heard that right: the girl had two hearts in her little body!
Radio presenter	When Hannah Clark was very young, the muscles of her own heart lacked the strength to pump blood around her body, so she urgently needed a new heart. But at that time, only a much smaller heart was available to be donated. This would not have been able to support Hannah's body on its own.
Radio presenter	Therefore, when she was 2, her medical team decided that the two hearts would be attached to each other. Hannah's original heart would pump fresh blood as far as the new heart, which in turn would pump this fresh blood to the rest of the body.
Radio presenter	Hannah's surgery was a success. She generally lived a normal life but, of course, she had to take medications to help her body accept the new heart.
Radio presenter	We'll be back with more about Hannah's story shortly.

Radio presenter	Welcome back. Back to Hannah, now 10 years old. Hannah's health suddenly declined due to a new, and different, health problem. Fortunately, the same heart surgeons agreed to help.
Radio presenter	They reviewed Hannah's condition. They discovered, to their amazement, that her own heart had recovered fully. This meant that she no longer needed the second heart. Not only that, they also believed that it was the medication which Hannah was taking, rather than the donor heart, that was having a harmful effect on Hannah's body.
Radio presenter	Therefore, once again, the team took another brave decision to remove the donor heart.
Radio presenter	After the second surgery, Hannah stopped the medication and her own heart continued to function normally. She is now healthy, and she looked happy at the press conference, alongside the two surgeons who saved her life.
Radio presenter	The surgeons explained that Hannah's case was a breakthrough because it was evidence that weak hearts can recover. This tale of two hearts is one of the most amazing cases, and as scientists and heart surgeons continue to do research, more patients may be saved.

Text C

You are going to hear a conversation between two university students, Jenny and Richard, about their views on laws.

Richard	Hi, Jenny. Wow, lots of notes right there!
Jenny	Yeah, I'm preparing for a speech but I'm still brainstorming for ideas.
Richard	Let's see. What's the topic? Maybe I can help.
Jenny	That would be great. The topic is still not final but I'm thinking about laws and if they are necessary at all.
Richard	Interesting! But we need laws, Jenny, to set boundaries. Don't you think so?
Jenny	Well, yes and no. We do need laws for complex matters, but humans shouldn't need laws for things that are common sense. That's what makes us human.
Richard	Nah. I think you're overestimating what humans can control using logic! We need laws for all matters. This is what makes us civilised.
Jenny	Hmm, if that is true, why hasn't the law stopped robberies? So laws on simple things would just be useless!
Richard	Well, laws for simple things would work as pointers for behaviour. What's wrong with that?
Jenny	What's wrong is that once there's a law for something silly, it's bound to be broken.
Richard	Hmm. There's some truth in what you're saying, actually. Some people are tempted to do bizarre things just to break the law!
Richard	Oh, hang on a minute, let me check this message.

Jenny	I think I'm gonna be on your side, Richard. We do need laws for some people's behaviour. Like, to stop you from checking your phone messages during a conversation.
Richard	Sorry! Back to your speech. I think humans need pointers. Think of something as silly as chewing gum. Do people know the mess it causes?
Jenny	Sure they do.
Richard	Of course, they do, but there's gum all over the place. So, would you say we need a law to stop this?
Jenny	Are you kidding?! Is that even possible? I mean, would a law really make a difference?
Richard	Oh yes. In Singapore, there was a ban on chewing gum for over 30 years, and people accepted it: no gum. But — you will not like this, Jenny — if a person was caught selling gum, they would be fined up to 100 000 dollars. And, yes, the law, and the fine especially, made a huge difference. I mean, even though chewing gum is no longer banned in Singapore today, you're unlikely to see anyone there doing this in public.
Jenny	I doubt it was the law or the huge fine that made the difference. I prefer to think of humans as free beings who can make choices about their behaviour. In fact, there is something better than laws, called a nudge; which is when choices are presented in a way that encourages better actions rather than forcing particular options on people. Like those signs that say "Thank you for recycling your shopping bags".
Richard	Oops sorry Jenny, I need to answer this.
Jenny	Arrr.
